

Pro Audio Asia

November - December 2008, Page 68

Sonifex reaffirmed the importance of IBC as its main broadcast showing and released a series of Redboxes, among them a new line identification originator, the Redbox RB-TGHD tone generator that provides line identification for multichannel audio systems, including Blits 5.1 and 7.1 surround sound used in high definition television broadcasts. Also new was the RB-MTV1 monitor for voice-over studios, news booths and commentary areas, the RB-DSD1 digital silence detection unit for radio station master outputs and transmitter sites, and the first video Redbox – the RB-VHDA8, a single-input/eight-output HD/SD-SDI distribution amplifier that supports all HD/SD-SDI formats and 3G.
