Radio Lollipop all clear with S2

Radio Lollipop is a charity that provides care, comfort, play and entertainment for children and young people in hospital. Established in 1979, it serves hospitals in the UK, Australia, New Zealand and the USA.

Radio Lollipop opened a new studio HQ at the Evelina Children's Hospital in London recently. The studio is set in glass walls underneath the glass atrium of the hospital with the studio building and its furniture made from clear perspex, designed by Architect Mark Maffey of Studio Mode, and the remaining equipment from the Sonifex S2 Solutions range of furniture.

The desks are made of clear perspex with the CD players housed in a Sonifex SOL-T12 desk-top pod. Beneath the desk sit two Sonifex SOL-B12 base pods that contain the amplifier, power supplies and other peripheral equipment. The centre piece of the studio is a Sonifex S2 split-desk mixer with 5 channels on one side and 10 channels on the other, it is configured with 6 stereo channels, one telco channel and 3 mic/line channels.
