## Sonifex bright ideas

Designed for studio installers and systems integrators, the SignalLED range of illuminated studio signs contains their own control electronics so they can be configured for colour and operation on site.

The signs are flush-mounted as standard but an optional kit can be used to end-mount them to a wall. There is also a double-sided end-mounted version that can be used, for example, in corridors, so that different wording is displayed on each side of the sign. Each sign is 40cm or 20cm long and there is a wide range of different lettering and colours available.

Signs can be on constantly, flash, pulse, or switched off using two control pull-low inputs. Each sign is supplied with a 6V DC power supply and a 5m cable.
