Sonifex hybrid mixer

Sonifex is debuting its S1 small format hybrid analogue/digital radio broadcast mixer. The S1 mixer delivers a compact, low cost, fixed format mixing console designed for on-air radio use and doesn't compromise on performance, according to Sonifex. The mixer can be fitted flush into a desk-top or can be rack-mounted by the addition of rack ears. It has 10 dual input channels consisting of four mono mic/line inputs, one telco/line input, one stereo cleanfeed/stereo line input, three dual stereo line inputs and one dual digital stereo input channel. There is also a 3.5mm insert jack socket for an iPod/MP3 auxiliary connection. The S1 has one stereo programme output available as both balanced analogue and AES/EBU or S/PDIF digital, so that a main programme feed can be sent to a transmitter whilst a digital feed can go directly to a PC for internet streaming. Two stereo aux outputs are also available and these can be configured as either pre or post the fader outputs.
