New Zealand Fire Service Choose Sonifex

Bridge Networks has provided the New Zealand Fire Service (NZFS) with Sonifex Net-Log Audio Loggers for installation within its Hazmat/Command Vehicles.

NZFS is in a building programme to produce 17 dual-purpose Hazmat/Command vehicles for deployment throughout New Zealand. The systems will enable NZFS to monitor and record their two-way communications at any incident the vehicles are called to.

The Net-log is a 4-channel audio logger that can record weeks of programming on an internal hard-disk and was designed as dedicated hardware for reliability.

'There are many applications for Net-Log, from radio stations recording their broadcasts for regulatory purposes, to small call centres, law firms, security companies and Emergency Services,' said Christine Fisher, MD for The Bridge Networks. 'Net-Logs have been installed in court rooms and police interview rooms for audio surveillance and, when combined with the D:Scribe transcription system, offer a cost saving desktop-based logging and filing system for audio and transcripts.'
