

New feature-rich stereo loudness controller

A new loudness controller has recently been released by DaySequerra offering Intelligent Loudness Control which delivers EBU R128, ATSC A/85 CALM and ARIB-B32 loudness compliance simultaneously for two independent stereo TV broadcasts in a cost-effective, feature-rich 1RU package.

This is the new iLC2ST, which eliminates viewer complaints without damaging the original mix and has a built-in ITU.BS 1770 loudness meter to ensure loudness compliance, without “squashing” the sound. Its remote dashboard provides remote control, monitoring and logging.

It also has a dual DSP platform, GPI-switched user presets, an ethernet interface/remote dashboard for compliance logging and optional analogue audio and HD-SDI I/O.

Sonifex is the sole distributor for DaySequerra products in the UK.
