

Sonifex SCi 2

Software Versions & Download

Installation Notes

SCi 2 uses modular drivers for supported products, allowing easier maintenance and selective installation. All modules are installed by default but can be deselected during setup.

If a discovered device has no driver, it will appear as "Not Supported". Clicking this allows automatic download and installation of the required module.

Manual installation: place downloaded modules into the "Modules" folder and restart SCi.

Version History

V2.0.12

- 1 Added RB-DEDD8 and RB-DEED8 modules

V2.0.11
